

In the Specification

Please amend the specification as follows:

Paragraph 37:

The liquid hydrocarbon fuel used in forming the aqueous hydrocarbon fuel emulsions may be any and all hydrocarbonaceous petroleum distillate fuels including, but not limited to, motor gasoline as defined by ASTM Specification D439, diesel fuel or fuel oil as defined by ASTM Specification D396, kerosene, naptha, aliphatics, paraffinics, and the like. The liquid hydrocarbon fuels comprising non-hydrocarbonaceous materials include, but are not limited to, alcohols such as methanol, ethanol and the like, ethers such as diethyl ether, methyl ethyl ether and the like, organo-nitro compounds and the like, and liquid fuels derived from vegetable sources (i.e., biodiesels) or mineral (i.e., mineral-derived fuels) sources such as corn, alfalfa, shale, coal and the like. The liquid hydrocarbon fuels can also include mixtures of one or more hydrocarbonaceous fuels and one or more non-hydrocarbonaceous materials. Examples of such mixtures are combinations of gasoline and ethanol, and combinations of diesel fuel and ether.
